

PLS Range Safety and Maintenance

NOTICE -- To all users of the rifle range and pistol pit:

- 1.** When you set up any of the movable target stands, after setting up your target, go back to your shooting station and visualize the path of the bullet from your firing point through the target and into the berm. ***All projectiles MUST impact the lower third of one of the berms, not the ground on the way to the berm, not impact high on the berm, and certainly not clear the top of the berm!***
Bullets that skip on the ground may ricochet over the top of the impact berms. If you notice anyone on the firing line skipping bullets off the range floor, point it out so that they can adjust their target height and eliminate the problem.
- 2.** Several of our metal target stands and the uprights on our permanent target stands are getting shot up. Please do not shoot the metal stands or the uprights. These are expensive and time consuming to repair or replace.
- 3.** If you notice that we are in need of more wooden backer boards for any of the fixed or portable target stands, please notify any of our board members through the [contact info on the club web page](#). We will take care of it.

Thank you for your help and cooperation,

PLSC Board of Directors
